### [Groundwater Resources Assessment, Volume 38 - 1st Edition](#)

The development of environmentally sound groundwater resources has recently become a high priority throughout the world. Many countries are currently developing comprehensive regulations for the management of groundwater resources. Within this framework an assessment of renewable groundwater resources is one of the most important factors.

### [Groundwater Sustainability Assessment Approach Guidance ...](#)

The resulting Groundwater Sustainability Assessment Approach (GSAA), (Appendix 1), hereafter referred to as the GSAA, is a high-level framework that can be interpreted for application across various scales, locations and circumstances.

### [International Groundwater Resources Assessment Centre | IGRAC](#)

IGRAC, the International Groundwater Resources Assessment Centre, is a UNESCO centre that works under auspices of WMO and is supported by the Government of The Netherlands. IGRAC specialises in regional- and transboundary -level assessment and monitoring of groundwater resources with a focus on managed aquifer recharge , groundwater governance and SIDS.

### [Water sources: groundwater - Canada.ca](#)

Introduction. Groundwater is an essential and vital resource for about a quarter of all Canadians. It is their sole source of water for drinking and washing, for farming and manufacturing, indeed, for all their daily water needs.

### [Groundwater Assessment | IGRAC](#)

Groundwater Assessment Assessment of groundwater resources yields knowledge necessary for their informed management and governance. Assessment means more than hydrogeological characterisation alone: it includes all other aspects (e.g. social, economic or environmental) that are needed for understanding of the resource and its state, in accordance with purpose of the assessment.

### [Groundwater resources - Grand River Conservation Authority](#)

As a result, it is important to manage groundwater resources to ensure there is balance between human needs and the needs of the natural environment. Responsible development in areas where water moves from the surface into the groundwater system (i.e. recharge) will help protect groundwater quality and quantity.

### [What is Groundwater - Groundwater Foundation](#)

Groundwater is the water found underground in the cracks and spaces in soil, sand and rock. It is stored in and moves slowly through geologic formations of soil, sand and rocks called aquifers. It is stored in and moves slowly through geologic formations of soil, sand and rocks called aquifers.

### [Water | Special Issue : Groundwater Resources Assessment ...](#)

Groundwater is a critical water resource for human survival and economic development in arid and semi-arid

areas. It is crucial to understand the groundwater circulation and hydrochemical evolution for sustainable management and utilization of groundwater resources in those areas.
