An aerial flight over Yellowstone s Midway Geyser Basin in 2004 shows Grand Prismatic Spring and Excelsior Geyser Crater, which drain into the nearby Firehole River. US Geological Survey If the

[What would happen if the Yellowstone supervolcano actually ...](#)

If the supervolcano underneath Yellowstone National Park ever had another massive eruption, it could spew ash for thousands of miles across the United States, damaging buildings, smothering crops, and shutting down power plants.

[What will really happen when the Yellowstone supervolcano ...](#)

Lurking beneath Yellowstone National Park is a massive underground reservoir of magma, capped by the park s famous caldera. 640,000 years ago, a super eruption rocked the region.

[What will really happen when the Yellowstone supervolcano ...](#)

Each of the major eruptions at Yellowstone caldera happened at least 650,000 years apart; in some cases 1 million years apart, so they are exceedingly rare. For the sake of your question, let s consider that Yellowstone will erupt as the worst-case scenario type of supervolcano.

[Yellowstone Supervolcano Isn t About to Erupt. But Here s ...](#)

Rather than predicting a perilous blanket of ash, Shamloo s work provides evidence that the changes in the magma beneath Yellowstone that led to the last such supereruption happened on a shorter
