[Silkworm - The Life Cycle of Silkworm | Processing of Silk](#)

The silk thread (yarn) is obtained from the silk moth's cocoon. The life cycle of silkworm is explained below in details. Stage 1: Egg. An egg is the first stage of the life cycle of silkworm. The egg is laid by a female moth which is mostly the size of small dots. A female moth lays more than 350 eggs at a time.in the springtime, the eggs hatch due to the warmth in the air. This procedure

[Silkworm Facts for Kids - Kiddle encyclopedia](#)

The silkworm (*Bombyx mori*) is the larva or caterpillar of a moth. Silk has been made for at least 5000 years in China. The moth is important because it makes the silk, and no longer lives in the wild.

[Uses of Silkworms | Hunker](#)

A silkworm's cocoon consists of a single thread of silk that stretches to a length of 1,000 to 3,000 feet when unraveled. A pound of raw silk requires the use of 2,000 to 3,000 cocoons and the world's silk manufacturers produce approximately 70 million pounds of raw silk each year.

[Bombyx mori - Wikipedia](#)

The silkworm is the larva or caterpillar of the domestic silkmoth, *Bombyx mori* (Latin: "silkworm of the mulberry tree"). It is an economically important insect, being a primary producer of silk . A silkworm's preferred food is

white mulberry leaves, though they may eat other mulberry species and even osage orange.
